Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Receipt is acknowledged of the amendments filed 11/09/01.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 52-77 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,248,161 ('161). Although the conflicting claims are not identical, they are not patentably distinct from each other because '161 claims a method of producing a soft hydrogel colored contacted lens by dissolving, dispersion incorporating, then applying the dispersion, followed by solvent evaporation. The monomeric lens in a mold is placed in contact with an imprinting surface, with polymerization to follow. The same monomers and art recognized method of forming encapsulated material within the lens are used in the instant application. Further, the same resin system, and coloring agents are also claimed. Those of ordinary skill would have expected the same therapeutically

effective contact system from the instant claims given the claims of '161. Therefore it would have been well within the skill of the ordinary practitioner to claim the instant hydrogel colored contact lens system given the claims of '161 which set out the method of forming said lens system.

Claims 78-80 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 7-9 of U.S. Patent No. 6,337,040 ('040). Although the conflicting claims are not identical, they are not patentably distinct from each other because '040 claims a method of producing a hydrogel colored contact lens by providing the same resin system, coloring agents, and particle size and imprinting system. Those of ordinary skill would expect the same therapeutically effective colored contact lens system given the claims of '040. Therefore, the instant colored contact lens system would have been obvious, given that '040 claims the same method of producing said system, using the same materials, and same limitations on weight percent and particle size.
